

Amplix offers a management information tool in a secure online working environment, without investment in hardware or software. It enables users to efficiently gather, monitor and measure any type of organisational information through an online platform.

Amplix provides a straightforward, reliable and efficient reporting platform in order to ensure that the gathered data is relevant, up to date and provides valuable strategic management information. Amplix is used in a variety of organisational fields, from skills and competency audits to stakeholder feedback, for internal and external use.

The research tool used for data collection is Amplix, a web-based survey tool that hosts a wide range of survey functionalities and reporting options. Amplix allows for self-administration, manual uploading of data as well as telephonic research and has been widely used in similar research projects in South Africa and internationally.

The overview below provides a high-level description of the process followed by using Amplix.

Online reporting is made possible on several levels through a simple login routine and is made accessible anywhere, anytime. Instant reporting triggers and access for all relevant stakeholders can be set up in advance.

**REPORTING**

After closure of the survey, quantitative reports will be generated from Amplix, including a range of benchmark reports. These reports will form the basis for data interpretation and qualitative reporting.
